Step 1: Get to know the exam with exam-style questions
Review the exam guide. Take the AWS Certification Official Practice Question Set to understand exam-style questions.

Course	Description	Type	Cost	Duration
Standard Exam Prep Plan: AWS Certified Machine Learning Engineer - Associate (MLA-C01 - English)	Fundamental The Standard Exam Prep Plan includes free resources for Steps 1–3 of the 4-step plan created by AWS experts. Learners will be enrolled in all courses included in the Exam Prep Plan. We recommend that you select and work through the exam prep content that meets your specific skill and knowledge needs. Then, you can progress through the material at your own pace.	Exam Preparation	Free	7 hours 30 minutes
Enhanced Exam Prep Plan: AWS Certified Machine Learning Engineer - Associate (MLA-C01 - English)	Fundamental The Enhanced Exam Prep Plan includes resources for each step of the 4-step plan created by AWS experts. Learners have access to everything in the Standard Exam Prep plan plus access to more robust role-based training, including game-based learning and experiential learning. Learners will be enrolled in all courses.	Exam Preparation	Paid	41 hours 15 minutes

What Is Amazon SageMaker?

Amazon SageMaker is a fully managed machine learning service. With Amazon SageMaker, data scientists and developers can quickly and easily build and train machine learning models, and then directly deploy them into a production-ready hosted environment. It provides an integrated Jupyter authoring notebook instance for easy access to your data sources for exploration and analysis, so you don't have to manage servers. It also provides common machine learning algorithms that are optimized to run efficiently against extremely large data in a distributed environment. With native support for bring-your-own-algorithms and frameworks, Amazon SageMaker offers flexible distributed training options that adjust to your specific workflows. Deploy a model into a secure and scalable environment by launching it with a single click from the Amazon SageMaker console. Training and hosting are billed by minutes of usage, with no minimum fees and no upfront commitments.

This is a HIPAA Eligible Service. For more information about AWS, U.S. Health Insurance Portability and Accountability Act of 1996 (HIPAA), and using AWS services to process, store, and transmit protected health information (PHI), see [HIPAA Overview](#).

Are You a First-time User of Amazon SageMaker?

If you are a first-time user of Amazon SageMaker, we recommend that you do the following:

1. Read [How Amazon SageMaker Works](#) – This section provides an overview of Amazon SageMaker, explains key concepts, and describes the core components involved in building AI solutions with Amazon SageMaker. We recommend that you read this topic in the order presented.
2. Read [Get Started](#) – This section explains how to set up your account and create your first Amazon SageMaker notebook instance.
3. Try a [model training exercise](#) – This exercise walks you through training your first model. You use training algorithms provided by Amazon SageMaker. For more information, see [Get Started](#).
4. Explore other topics – Depending on your needs, do the following:

AWS Certified Machine Learning Engineer - Associate (MLA-C01) Exam Guide

Introduction

The AWS Certified Machine Learning Engineer - Associate (MLA-C01) exam validates a candidate's ability to build, operationalize, deploy, and maintain machine learning (ML) solutions and pipelines by using the AWS Cloud.

The exam also validates a candidate's ability to complete the following tasks:

- Ingest, transform, validate, and prepare data for ML modeling.
- Select general modeling approaches, train models, tune hyperparameters, analyze model performance, and manage model versions.
- Choose deployment infrastructure and endpoints, provision compute resources, and configure auto scaling based on requirements.
- Set up continuous integration and continuous delivery (CI/CD) pipelines to automate orchestration of ML workflows.
- Monitor models, data, and infrastructure to detect issues.
- Secure ML systems and resources through access controls, compliance features, and best practices.

Target candidate description

The target candidate should have at least 1 year of experience using Amazon SageMaker and other AWS services for ML engineering. The target candidate also should have at least 1 year of experience in a related role such as a backend software developer, DevOps developer, data engineer, or data scientist.

Recommended general IT knowledge

The target candidate should have the following general IT knowledge:

- Basic understanding of common ML algorithms and their use cases
- Data engineering fundamentals, including knowledge of common data formats, ingestion, and transformation to work with ML data pipelines
- Knowledge of querying and transforming data

Version 1.0 MLA-C01

1 | PAGE

Amazon's learning path

- <https://aws.amazon.com/training/learning-paths/machine-learning/exam-preparation/>

This learning path is **designed specifically for individuals preparing to take the AWS Certified Machine Learning – Specialty exam**. In addition to these self-paced digital training courses, we recommend one or more years of hands-on experience using machine learning (ML) services on AWS.

Consider taking the Certified AI Practitioner exam first

New Question Types

- The old ones are still here
 - Multiple choice: One correct answer out of 4 choices
 - Multiple response: Two or more correct answers out of 5 or more choices. No partial credit.
- And three new ones being introduced with this exam
 - Ordering: Choose the correct 3-5 responses and place them in the correct order. No partial credit.
 - Matching: Match responses to 3-7 prompts. No partial credit.
 - Case Study: Re-uses the same scenario across 2 or more questions. Each question evaluated separately.

Ordering

A company needs to encrypt an existing Amazon RDS DB instance that is unencrypted. Downtime is acceptable for the project.

Select and order the correct steps from the following list to provide the required encryption. Each step should be selected one time or not at all. (Select and order THREE.)

- Create a snapshot of the existing DB instance.
- Create an encrypted copy of the snapshot.
- Create an encrypted read replica of the existing DB instance.
- Enable encryption on the existing DB instance.
- Restore the DB instance from the encrypted read replica.
- Restore the DB instance from the encrypted snapshot.

Step 1:

Step 2:

Step 3:

Matching

A company needs to minimize its Amazon S3 storage costs.

Select the correct S3 storage class from the following list to meet this requirement for each use case. Each storage class should be selected one or more times. (Select FOUR.)

- S3 Glacier Flexible Retrieval
- S3 Standard

Application logs that are retrieved daily for analysis

Backups that are restored every 3 months and have a required retrieval time of up to 12 hours

Data that is retrieved one time each year

Video files that must be retrieved within milliseconds

Case Study

Case Study - 2 Questions

A company is migrating an ecommerce application to AWS. The application consists of web servers, application servers, relational databases, storage, and a cache. The company needs to design an architecture that provides resilience against failures.

Question 1 of 2

Which combination of actions will achieve fault tolerance for the web servers and application servers? (Select TWO.)

- ☐ Configure Auto Scaling groups of Amazon EC2 instances across multiple Availability Zones.
- ☐ Deploy Amazon EC2 instances in multiple subnets in one Availability Zone.
- ☐ Implement load balancing for the Amazon EC2 instances.
- ☐ Launch Amazon EC2 Spot Instances.
- ☐ Launch large Amazon EC2 instances.

What to Expect

Sitting for the exam

- 3 hours! (170 minutes technically)
 - But you'll probably only need a little over 2.
 - 65 questions (85 during beta)
 - TAKE THE TIME TO FULLY UNDERSTAND THEM
- Use the flag capability
 - You'll have time to go back and double check things.
- You can't bring anything into the room
 - You'll be given note paper or dry-erase board, earplugs, and that's it.
- Schedule smartly
 - As soon as possible after you've mastered the practice exams
 - Choose a time of day that matches your highest energy level – you need stamina
 - Remember different testing providers may have different availability

Prepare

- Use the bathroom before you head in
- Eat something (but not right beforehand)
- Get a good night's sleep
- Review things you need to memorize before going in
 - Recall, Precision, F1
 - Regularization techniques
- Be alert
 - Whatever works for you...
- Make sure you're ready
 - You've got \$300 on the line
 - Take the practice exams! Repeatedly!

Strategies

- Don't rush
 - For each question, take the time to understand:
 - What you are optimizing for
 - Requirements
 - The system as a whole
- Your pace should be about 2 – 2 ½ minutes per question
 - If you're taking longer, make your best guess, flag it and come back to it later
- Use the process of elimination
 - Even if you don't know the correct answer, you can often eliminate several.
- Keep calm
 - You're not going to get 100%. You don't have to.

Your AWS Certification journey

Foundational

Knowledge-based certification for foundational understanding of AWS Cloud.

No prior experience needed.

Associate

Role-based certifications that showcase your knowledge and skills on AWS and build your credibility as an AWS Cloud professional.

Prior cloud and/or strong on-premises IT experience recommended.

Professional

Role-based certifications that validate advanced skills and knowledge required to design secure, optimized, and modernized applications and to automate processes on AWS.

2 years of prior AWS Cloud experience recommended.

Specialty

Dive deeper and position yourself as a trusted advisor to your stakeholders and/or customers in these strategic areas.

Refer to the exam guides on the exam pages for recommended experience.

AWS Certification Paths – Architecture

Architecture

Solutions Architect

Design, develop, and manage cloud infrastructure and assets, work with DevOps to migrate applications to the cloud

Architecture

Application Architect

Design significant aspects of application architecture including user interface, middleware, and infrastructure, and ensure enterprise-wide scalable, reliable, and manageable systems

https://d1.awsstatic.com/training-and-certification/docs/AWS_certification_paths.pdf

DataCumulus

Sundog
Education

AWS Certification Paths – Operations

Operations

Systems Administrator

Install, upgrade, and maintain computer components and software, and integrate automation processes

Operations

Cloud Engineer

Implement and operate an organization's networked computing infrastructure and Implement security systems to maintain data safety

AWS Certification Paths – DevOps

DevOps

Test Engineer

Embed testing and quality best practices for software development from design to release, throughout the product life cycle

optional for IT/
cloud professionals

DevOps

Cloud DevOps Engineer

Design, deployment, and operations of large-scale global hybrid cloud computing environment, advocating for end-to-end automated CI/CD DevOps pipelines

optional for IT/
cloud professionals

Optional

recommended for IT/cloud
professionals working on
AI/ML projects

Dive Deep

DevOps

DevSecOps Engineer

Accelerate enterprise cloud adoption while enabling rapid and stable delivery of capabilities using CI/CD principles, methodologies, and technologies

optional for IT/
cloud professionals

recommended for IT/cloud
professionals working on
AI/ML projects

AWS Certification Paths – Security

Security

Cloud Security Engineer

Design computer security architecture and develop detailed cyber security designs. Develop, execute, and track performance of security measures to protect information

Security

Cloud Security Architect

Design and implement enterprise cloud solutions applying governance to identify, communicate, and minimize business and technical risks

AWS Certification Paths – Development & Networking

Development

Software Development Engineer

Develop, construct, and maintain software across platforms and devices

Networking

Network Engineer

Design and implement computer and information networks, such as local area networks (LAN), wide area networks (WAN), intranets, extranets, etc.

AWS Certification Paths – Data Analytics & AI/ML

Data Analytics

Cloud Data Engineer

Automate collection and processing of structured/semi-structured data and monitor data pipeline performance

AI/ML

Machine Learning Engineer

Research, build, and design artificial intelligence (AI) systems to automate predictive models, and design machine learning systems, models, and schemes

AWS Certification Paths – AI/ML

AI/ML

Prompt Engineer

Design, test, and refine text prompts to optimize the performance of AI language models

AI/ML

Machine Learning Ops Engineer

Build and maintain AI and ML platforms and infrastructure. Design, implement, and operationally support AI/ML model activity and deployment infrastructure

AI/ML

Data Scientist

Develop and maintain AI/ML models to solve business problems. Train and fine tune models and evaluate their performance

Congratulations
